FLIGHTSAFETY ANNOUNCES A NEW GARMIN G1000 ELEARNING COURSE FOR PISTON-POWERED AIRCRAFT

LaGuardia Airport, New York (May 8, 2009) – FlightSafety International announces a new eleven-hour web-based Garmin G1000 eLearning course for piston aircraft.

“This interactive, self-paced course provides comprehensive training on all aspects of the Garmin G1000. It will help pilots to be completely familiar with all the features and functions of the G1000 prior to entering the actual aircraft,” said Ariel Landau, eLearning Operations Manager, FlightSafety International.

The simulated graphical environment will help pilots to understand and perform the various tasks needed to learn the device quickly and easily. It includes instruction on key features including the Garmin autopilot (GFC 700), TAWS, WAAS, FliteCharts and XM weather.

“FlightSafety’s eLearning solutions for the G1000 have proven themselves to be an effective training method for our customers,” said Matt Harrah, Garmin’s Director of Aviation Product Support. “Learners are able to learn the systems with greater efficiency, on their own schedule, and in the comfort of their homes.”

A large number of piston-powered aircraft manufactured by Cessna, Hawker Beechcraft, Diamond, Mooney, Piper and Tiger are equipped with the Garmin G1000.

FlightSafety offers a variety of other web-based training courses including Safety Management Systems, Cold Weather Operations, Domestic RVSM, EGPWS/TAWS, CFIT, TCAS, Executive Safety and Universal FMS Fundamentals.

The FlightSafety web-based Learning Management System tracks course progress and returns participants to the last previously-viewed screen. They are provided with a record of completion once they have successfully passed the assessment at the end of the course. Flight department managers can also receive weekly progress reports on members of their staff who are following eLearning programs.

FlightSafety International is the world’s premier professional aviation training company and supplier of flight simulators, visual systems and displays to commercial, government and military organizations. We provide more than a million hours of training each year to pilots, technicians and other aviation professionals. FlightSafety operates the world’s largest fleet of advanced full flight simulators at our extensive network of Learning Centers located in the United States, Canada and Europe.
